

**What works like
an IBM[®] PC,
networks with
an IBM PC,
and costs about
the same as
an IBM typewriter**

PCterminalTM

The First IBM Compatible Personal Computer With Built-in Local Area Network.

PCterminal. It's changing the way you look at personal computers.

Think of it. PCterminal increases the number of user stations without substantially increasing your overhead.

You become more productive. Yet you spend less.

You can run programs under the IBM-DOS operating system — quickly, easily, efficiently. In turn, the possibilities you imagine today are very productive realities tomorrow.

You see, we designed our intelligent PCterminal with a proprietary network protocol to allow PCterminal to initialize its operating system from the remote floppy (or hard-disk) of your IBM PC.

And that's just for starters.

You are able to immediately communicate without a floppy disk drive. PCterminal simply picks a PC in the network and shares its peripheral devices. So now up to 16 PCterminals can be connected to any PC or PC XT in the network.

That's very productive. As you can see, our PCterminal works smart.

With a transmission rate of 1M bit/sec, PCterminal allows machines to be linked with several thousand others through an adapter board and software.

Not several hundred. Several thousand. PCnet™ is built into PCterminal. It's that complete.

And it features "remote execution". With it, you can, on one terminal, run a command on another PC as if the command had been entered on the second computer's keyboard.

Nice.

Now one computer can act as an execution server for other computers in the network.

In addition to the rewards of our PCterminal's networking talent, it can be equipped with an optional floppy disk to run programs locally.

But what's included in the overall system package?

Everything to make your life that much easier.

Like a monitor. A keyboard. An Intel 8088 microprocessor. Serial and parallel interfaces. Four expansion slots for peripheral cards. 64K of RAM memory, expandable to 256K. And, of course, a connection for an optional 5¼" floppy disk drive.

We'll also work with you to define exactly what PCterminal can do for you. We'll present recommendations, suggestions, and direction.

We offer worldwide support. In major markets. In major countries. From Boston to Brussels. Manhattan to Munich.

And we believe in backing our products, so we offer you a solid, 90 day warranty.

We also provide a complete line of hard-disk storage products tailor-made for use with the PCterminal's networking environment, featuring up to a ½ gigabyte of storage per PC and removable Winchester cartridges for backup.

Oh, and about the price. It's a very compatible \$1295.

All in all, a small price to pay for your very own computer.
